

1. Double-click `httprat.exe`, the HTTP RAT main window appears as shown below:

2. Uncheck send notification with IP address to mail option, enter the server port to 84 and click Create.

3. Once the httpserver.exe file is created, a pop-up will be displayed, click OK and share the file with Windows 10 virtual machine.

The file will be saved into HTTP RAT TROJAN folder as show below:
